

# Stain Remover

## INGREDIENTS:

130 g washing soda  
125 ml hydrogen peroxide (3%)  
5 lt warm/hot water

## METHOD:

Add all ingredients directly to the laundry sink or a bucket and mix until combined.

## TO USE:

Add stained clothing to solution and use a wooden spoon to push down and agitate clothing. Allow to rest, agitating periodically, for a minimum of 4 hours. Remove from solution and wash clothes as usual. Discard solution.

## NOTES:

You can find hydrogen peroxide in the beauty aisle of most supermarkets. It is a natural alternative to bleach.

Because hydrogen peroxide degrades quickly, don't make this solution in advance. Mix it up just prior to use.

Remember to patch test first to see how the fabric will react.
